

SCORPIONTRACK

X-Series is built with tracker compatible capabilities, meaning you can pair it with your ScorpionTrack S5 tracker to create a layered approach to your vehicle security.

The ScorpionTrack stolen vehicle tracker uses advanced technology along with movement detection sensors hidden within the vehicle, so you can relax knowing that your pride and joy is protected against sudden attack and potential theft.

SCORPION[®] AUTOMOTIVE X-SERIES

CAN Bus Immobiliser

AN INSTANT VEHICLE IMMOBILISER THAT DISARMS
VIA CUSTOM PIN CODE

SCORPION[®]
AUTOMOTIVE

MADE IN
BRITAIN

X-Series is an invisible and undetectable CAN Bus Immobiliser that protects from modern vehicle theft techniques such as key relay attacks.

The latest technology is used to give vehicles the highest level of protection with the immobiliser automatically activating as soon as the ignition is turned off.

This protects against key clone attacks as a unique custom pin, created via the vehicle's buttons or dash, or a driver tag is needed to disarm the immobiliser and for the ignition to start again.

VEHICLE IMMOBILISATION

FITTING SERVICE

IGNITION OFF

The immobiliser instantly starts protecting your vehicle against theft once your vehicle's ignition has been turned off.

PREVENT THEFT

If someone gets hold of the vehicle's keys or attempts a relay attack, the vehicle cannot be moved without the correct pin or if the connected S5 tracker driver tag is present.

ENTER CUSTOM PIN

Enter your unique custom pin via the dash or steering wheel to disarm the immobiliser and set off in the vehicle as normal.

WHAT IS KEY RELAY THEFT?

A relay attack usually involves two people working together. One stands by the targeted keyless vehicle, while the other stands near the house with a device that can pick up a signal from the key fob.

This tricks the vehicle into thinking the key fob is present and can allow the thieves to get away in as little as 30 seconds.

KEY RELAY DEFENCE

The X-Series prevents Key Relay theft where a criminal picks up the signal from your car key and uses a transmitter to make your car believe the key is present, opening the car and allowing the thief to start it.

PERSONAL SECURITY

The X-series uses a combination of buttons and switches in your car to enable/disable the immobiliser. You can choose any combination of buttons making it unique to yourself and your car.

HIGH LEVEL PROTECTION

There is no need to remember to reactivate the system once you have completed your journey, because once the vehicle has been turned off the system will automatically activate and start protecting your vehicle.
